Apollonius principles for AI

Purpose

AI is for “Augmenting Intelligence” and supporting what humans do, not replacing them.

Transparency

Your data is your data; Committed to transparency about how our systems were trained and the data used to train them.

Skills

AI systems must be trained by and support human professionals in the industry.

AI For Social Awareness

We believe that AI can provide new ways of approaching problems and meaningfully improve people's lives. With AI, we have another tool to explore and address hard, unanswered questions.
